Aim: Create a webpage that **retrieves, displays, and updates user data** from a MySQL database. Implement **CRUD operations (Create, Read, Update, Delete)** using PHP & MySQL. Ensure user input is **validated and securely stored** in the database.

Code:

▪ **Db.php:**

```
<?php

$host = '127.0.0.1';
$user = 'root';
$pass = "";
$dbname = 'mdm\_exp6';

$port = 3306;

$conn = new mysqli($host, $user, $pass, $dbname, $port);

if ($conn->connect\_error) {
    die("Connection failed: " . $conn->connect\_error);
}
```

▪ **register.php**

```
<?php
require 'db.php';
$message = "";

if ($_SERVER["REQUEST_METHOD"] == "POST") {
    $username = trim($_POST['username']);
    $email = trim($_POST['email']);
    $password = $_POST['password'];

    if (empty($username) || empty($email) || empty($password)) {
        $message = "All fields are required!";
    } elseif (!filter\_var($email, FILTER\_VALIDATE\_EMAIL)) {
        $message = "Invalid email format!";
    } else {
        $hashed\_password = password\_hash($password, PASSWORD\_DEFAULT);

        $stmt = $conn->prepare("INSERT INTO users (username, email, password)
VALUES (?, ?, ?)");
        $stmt->bind\_param("sss", $username, $email, $hashed\_password);

        if ($stmt->execute()) {
            $message = "Registration successful! <a href='display.php'>View
Users</a>";
        } else {

```

```

        $message = "Error: " . $stmt->error;
    }

    $stmt->close();
}
}
$conn->close();
?>

<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <title>User Registration</title>
    <style>
        body { font-family: Arial, sans-serif; margin: 50px; }
        .container { max-width: 400px; margin: auto; padding: 20px; border: 1px solid #ccc;
border-radius: 5px; }
        input[type="text"], input[type="email"], input[type="password"] { width: 100%;
